Education

University of St. Thomas
B.S. in Computer Science

December 2023
St. Paul, MN

Work Experience

DataAnnotation.tech

March 2024 – Present

AI Independent Contractor

Remote

- Analyze cutting edge artificial intelligence models for testability, accuracy, correctness, verbosity, harmlessness and overall quality, in order to determine the performance of various AI models.
- Correct errors and optimize AI generated code.

Argos Risk

May 2022 – May 2023

Software Development Intern

Edina, MN

- Key team member in a companywide migration from Sugar (CRM) to HubSpot.
- Automated the process of sorting and organizing email lists needed for marketing campaigns.
- Created chatbots for the public-facing and subscriber-facing websites.
- Built and maintained a critical customer subscription churn monitoring tool, which allowed for Argos Risk to ensure compliance of subscribers in line with the subscriber contract, a vital step in decreasing Argos Risk's cost of doing business.

Mathnasium

October 2020 – August 2021

Assistant Director and Lead Tutor

Savage, MN

- Worked with and managed a team of math tutors.
- Tutored students, discussed progress with parents, conducted trials and generated new student contracts, built the team's weekly schedule, hired and developed effective tutors.
- Developed lead generation programs via connections with other local businesses.

Fortive

May 2019 – August 2019

Application Development Intern

Woodbury, MN

- Built financial modeling tools in Excel, which were used by the strategic planning team for the 2020-2022 plan.
- Automated data collection and analysis needed for the accounting team's monthly reporting using Excel and VBA.
- Leveraged proficiency in Microsoft Flow and SharePoint to develop a web-based application for employee interaction during Kaizen events.

Projects

From Nand To Tetris - Solo Development

December 2023 - April 2024

- A computer engineering passion project and learning experience done in order to better understand the fundamentals of computing.
- The project begins with elementary logic gates and ends with a working HACK computer with a custom machine language, assembler, virtual machine, high level language, compiler, and operating system.
- Based on the book *The Elements of Computing Systems: Building a Modern Computer from First Principles* by Noam Nisan and Shimon Schocken.
